Description

The TT-3086A Capsat® Fleet55 communications terminal offers high-speed and cost effective voice and data communication based on either the MPDS (Mobile Packet Data Service) protocol or 64 kbps ISDN PPP connection.

With MPDS you are only charged for the amount of data transferred, not for the time the channel remains open, making it the most economic and convenient solution for e-mail, small and medium size transfer, LANs, VPNs and Internet.

ISDN service provides a high-capacity channel with a constant data stream and are usually preferable for up- or downloading large files.

The compact antenna is 68 cm high, has a diameter of just 57 cm and weighs only 18 kg. It is line replaceable for easy service and maintenance.

The Capsat® Fleet55 transceiver provides a constant two-way link to Inmarsat satellites offering Inmarsat Fleet MPDS communications. The system is accompanied by user-friendly software, which enables simple configuration from a standard PC.

The Capsat® Fleet55 transceiver and the antenna provide the hub for online communication all the time via desktop phones, payphones, DECT phones and fax machines.

Connected to an IP router, the Capsat® Fleet55 terminal can integrate the vessel 24 hours a day with onshore management systems via the Web, including e-mail and Internet services.

The TT-3086A operates through the established network of Inmarsat and GPS satellites with interconnection to the international fax and packet switched data network, offering fast and reliable transfer of information, 24 hours a day.
